

# Chapter 1

## intro

Zinc finger proteins fun.

artificial chimeric enzymes

designer dna enzymes from the zinc finger + recombinant dna stuffsies

rna polymerase, transcription factors, methylation, nuclease domain, recombinase domains, etc, etc

gene editing 2009 nyt article

evil companies making it hard to get access to it (sangamo biosciences) ed lanphier

TALE a new dna binding protein

HLA protein humans

precise double strand cut via CRISPR yay

:
